Undergraduate Research Assistant Position Open for Spring/Summer 2021!

The primary focus of the lab involves the assessment and treatment of biopsychosocial aspects and neural underpinnings of chronic pain in children and adolescents. The position will span projects that involve questionnaires, physiological measures, and brain imaging. The research assistant will gain familiarity in several psychological and neuroscience research methods across various chronic pain populations (i.e. musculoskeletal pain, cancer survivorship etc.), with efforts to match interest with current projects. Responsibilities may involve implementation of experiments, subject recruitment, and analysis. We are looking for motivated, enthusiastic and organized individuals. Knowledge of SPSS or programming is helpful, but not required. Experience with children and families is preferred. This position requires a commitment of 9-10 hours per week for the spring quarter and full time (40 hours per week) for the summer. You may sign up for 3 units of research credit in the spring quarter and a stipend may be available for summer 2021.

Due to the COVID-19 pandemic, research assistantships may take place in either remote or on-campus settings depending on Stanford University policies. The BPP Lab will communicate any updates as soon as they are available.

To apply, please complete the application [here](#). If you have any questions, please feel free to email us at PedsPainLab@stanford.edu.
