

Research Assistant Position at Stanford Psychophysiology Laboratory

Lab: Stanford Psychophysiology Laboratory (SPL)

Lab Website: <http://www.spl.stanford.edu>

Supervising Researchers: Pardis Miri (pardis.stanford@gmail.com) and Andero Uusberg

Project Description

This project is looking at new ways to facilitate emotion regulation via haptic technology. It provides a unique opportunity to deepen your understanding of research that bridges psychology, computer science, and product design.

Duties & Time Commitment

Research assistants (preferably full time for one year) are needed to help run experiments at Stanford and/or San Francisco State University. Duties can also include searching and summarizing research literature, data entry and organization, conducting and transcribing interviews, assisting with data analysis, and research paper write-up.

Qualifications & Skills

Highly motivated eager-to-learn undergraduates or college graduates with a long-term interest in research related to psychology, neuroscience, computer science, or other health/social sciences. Statistics, programming, and psychology background is a plus.

Compensation

Work-study, volunteer, or course-credit. We do not have any paid non-work study positions available.

To Apply

Please send a cover letter, CV, and description of your research interests to Pardis Miri pardis.stanford@gmail.com.
