**Faculty mentor:** Steven O. Roberts

**Research supervisor(s) (name, position, email):**
Carmelle Bareket-Shavit, Lab Manager, cbareket@stanford.edu

**Project topic(s):** Discrimination, Racism, Systemic Inequality, Metascience, Race

**Brief description of scientific issues:**
Psychological science is uniquely positioned to identify and dismantle the thoughts, feelings, and behaviors that reinforce racism (i.e., a system of advantage based on race; 1), and to inform students, scientists, and policymakers on how to best do so. Yet across the short history of the discipline, psychology science has often reinforced the very racism that it is positioned to dismantle. In collaboration with the Social Concepts Lab, a PsychSummer research assistant will work on projects that help identify and dismantle racism within psychological science, so that psychologists may more efficiently understand and dismantle racism in the real world.

**Skills required:**
Ideal candidates will have a strong interest in social and/or developmental psychology and specifically in the topics outlined above. They will also be reliable, friendly, and highly motivated. Previous research experience and completion of relevant courses are preferred but not required.

**Skills to be learned:**
Data collection, data coding and management, archival analysis

**Hours:** Full time
